

# Smart Technology, Made to Care.

Innovative, Interoperable Telecare Solutions

## Notifier

Our CAIR Notifier is the Smart Pager that sits at the heart of our CAIR range of devices and acts as a hub that joins up all the dots. The data from the device can also be uploaded onto a local computer for auditing purposes.

## CAIR in Action

# Smart Technology, Made to Care.

Innovative, Interoperable Telecare Solutions

Using Cair's new wireless Telecare solutions, care homes are able to provide more person centred care for the people they support. Our sensors can ensure that risks such as falls, getting out of bed, door activity, incontinence and residents needing support can be managed using the innovative range. Not only does this provide a safer environment, it means that care can be delivered in a smarter, more productive way and more time can be spent on meaningful activities with residents, improving their wellbeing. Our smart technology is made to care.
