## Vibe

Sensory Impairment Solution

**The Vibe is a simple, streamlined, all in one DDA device.** This visual and audible aid alerts those with sensory impairments and other needs that a connected alarm or sensor has been activated. Designed to discreetly fit into your lifestyle with one neat box that does it all: audio, visual and vibratory pillow alerts and reminders.

With 5 LED icons, it's easy to identify the type of alert being received. With dedicated fire and gas icons, there's also 3 other programmable locations.

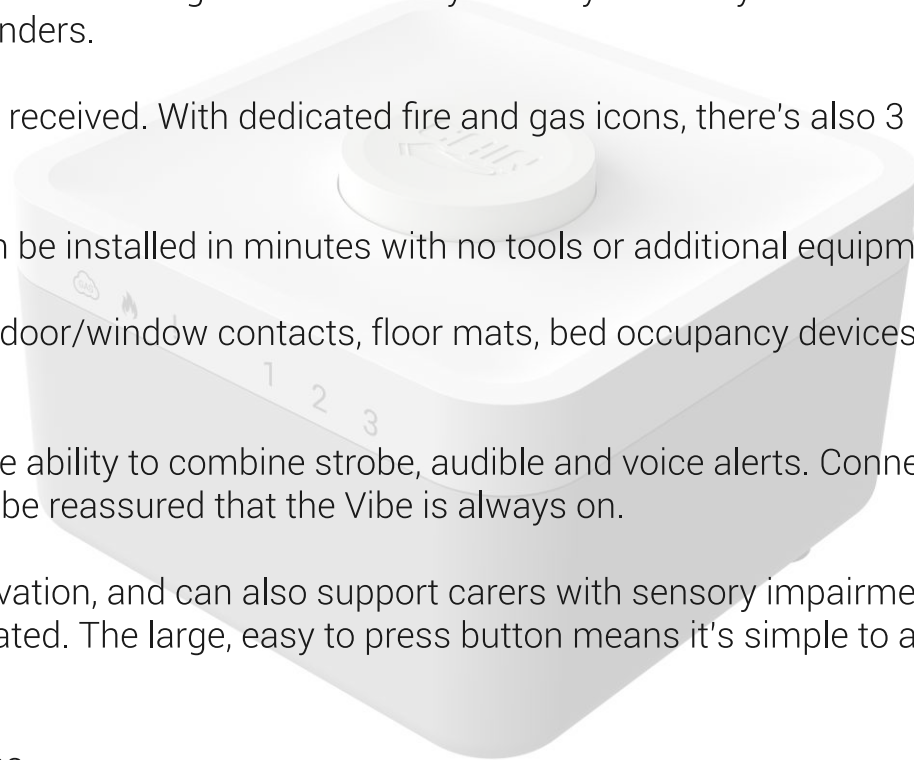

Using its unique voice guided programming interface, it can be installed in minutes with no tools or additional equipment required.

The Vibe works with a wide range of sensors including our door/window contacts, floor mats, bed occupancy devices, movement sensors, medication sensors and so much more.

The Vibe can be configured to suit the individual, with the ability to combine strobe, audible and voice alerts. Connected to the mains power, with a 24-hour back-up battery, the user can be reassured that the Vibe is always on.

The Vibe will alert the user of an environmental sensor activation, and can also support carers with sensory impairments, so that they can be notified when a telecare sensor has been activated. The large, easy to press button means it's simple to acknowledge the alarm.

Available on multiple protocols to fit in with existing systems.

Sensory Impairment Solution

**There are endless possibilities with the Vibe, which can be used in a multitude of ways with a huge range of wireless peripherals.**

From visually alerting someone living with hearing loss that a smoke detector has activated, or alerting someone with a visual impairment that there is a flood in the kitchen, reminding that medication needs to be taken, or waking a carer by the vibrating pillow alert that someone needs support at night; the Vibe is the solution.

Explore the next pages to find out just some of the ways the Vibe can be used.

Sensory Impairment Solution

Move  
Motion Sensor

The **CAIR Move** is designed to detect motion. When used with the Vibe, it can notify a carer when movement has been detected. It can also offer additional security for those living alone if movement is detected in their home.
